

Room in virtual mode

The platform now allows sessions to be created without the need to launch the physical Room. Therefore, providing license count permits, multiple virtual Rooms can be launched simultaneously **without the need of a Room Launch Code**.

Remote presenters¹

Presenters can access the platform remotely, utilising Remote Presenter feature. In this mode, the entire mashme.io feature suite is not yet available, however **Remote Presenters are able to:**

- Upload, create and share materials (hidden or visible modes).
- Create, launch, close and clone polls.
- Share the screen without the need to install any extensions.
- Interact with all the participants through the Room chat.
- Private chats.
- Control over the session (Online people)

Participant view

Participants will continue with the same access experience when joining a session. The only change in the participant's interface is that **Room streaming video stream will not be displayed** as the physical Room is not launched.

¹ mashme.io is working on improving access to more features in Remote Presenter mode.
